14-day test positive rate $=4.5 \%$

-Infections 14-day moving average/100,000 population

The CDC issued new guidance the week of February $7^{\text {th }}$. The information shown here is provided for context.

CDC indicators and thresholds for risk of introduction and transmission of COVID-19 in schools

| Indicators | Lowest risk of transmission in schools | Lower risk of transmission in schools | Moderate risk of transmission in schools | Hizher risk of transmission in schoots | Hiphest rist of transmission in schoots |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Come Indicators |  |  |  |  |  |
| Number of new cases per 100,000 persons within the last 14 dsys* | $\cdots$ | 5 to $<20$ | 20 to < 30 | 50 to $\leq 200$ | >200 |
| Percentage of RT-PCR tests that are positive during the last 14 days** | <3\% | 3\% to $03 \%$ | 5\% to $<8 \%$ | 8\% to $\leq 10 \%$ | >10\% |
| Ability of the school to implement 5 key mitigation strategies: <br> - Consistent and correct use of masks <br> - Social distancing to the largest extent possible <br> - Hand hygiene and respiratory etiquette <br> - Cleaning and disinfection <br> - Contact tracing in collaborstion with local health department <br> Schools should adopt the sadditional mitigation messures outlined below to the extent possible, practical and fessible. | Implemented <br> all 5 <br> stratepies <br> correctly and consistently | Implemented all 5 stratepies correctly but inconsistently | Implemented 3-4 <br> strategies correctly and consistently | Implemented $1-2$ <br> stratefies correctly and consistentiy | Implemented no strategies |
| Secondary Indicators |  |  |  |  |  |
| Percent change in new cases per 100,000 populstion during the last 7 dayz compared with the previous 7 deys (negative values indicate improving trends) | <-10\% | -10\% to $<-5 \%$ | $-5 \%$ to $00 \%$ | $0 \%$ to $\leq 10 \%$ | >10\% |
| Percentage of hospital inpstient beds in the community that are occupied** | <80\% | c30\% | 30 to 90\% | >90\% | >90\% |

| Percentage of intensive care <br> unit beds in the community that <br> are occupied*** | $<80 \%$ | $<80 \%$ | 80 to $90 \%$ | $>90 \%$ | $>90 \%$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Percentage of hospital inpatient <br> beds in the community that are <br> occupied by patients with <br> COVID-19*** | $<5 \%$ | $5 \%$ to $<10 \%$ | $10 \%$ to $15 \%$ | $>15 \%$ | $>15 \%$ |
| Existence of localized <br> community/public setting <br> COVID-19 outbreak*** | No | No | Yes | Yes | Yes |

*Number of new cases per 100,000 persons within the last 14 days is calculated by adding the number of new cases in the county (or other community type) in the last 14 days divided by the population in the county (or other community type) and multiplying by 100,000.
**Percentage of RT-PCR tests in the community (e.g., county) that are positive during the last 14 days is calculated by dividing the number of positive tests over the last 14 days by the total number of tests resulted over the last 14 days. Diagnostic tests are viral (RT-PCR) diagnostic and screening laboratory tests (excludes antibody testing and RT-PCR testing for surveillance purposes). Learn more on the Calculating Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) Laboratory Test Percent Positivity: CDC Methods and Considerations for Comparisons and Interpretation webpage.
